

ABSTRACT

A flame-retardant resin composition comprises a base resin (A), an organic phosphorus compound (B) having
 5 a unit represented by the following formula (1a), and a flame-retardant auxiliary (C).

Wherein Ar represents an aromatic hydrocarbon ring or a nitrogen-containing aromatic heterocycle; X^1
 10 represents an oxygen atom or a sulfur atom; Y^1 and Y^2 are the same or different and each represents a hydrocarbon group, an alkoxy group, an aryloxy group, or an aralkyloxy group; Z^1 represents an alkylene group, or a nitrogen-containing bivalent group corresponding to an
 15 alkylamine; Y^1 and Y^2 may bind to each other, and Y^1 and Y^2 together with the adjacent phosphorus atom may form a ring; "a" denotes 0 or 1; and "b" denotes an integer of 1 to 6.
